## LOPEC 2017

Visit RK PrintCoat Instruments (Hall B0, stand 209) to see our latest innovation in reel-to-reel technology, the VCM-L lab / Pilot Coating Machine.

Fully compatible with the new and exciting innovations in printed electronics on the world stage, this reel to reel lab/pilot coater is custom designed and manufactured to suit your precise specifications. With over 30 years' experience in the surface coating industry our machines are built to be both reliable and flexible and are a must have for those entering this emerging market.

With the ability to print, coat and laminate of all types of flexible webs applying various coatings for multiple application processes, the VCML is ideal for product development, quality control, and small scale production for low volume of a specialised product.

Various options available include Slot die, hot air drying, Rotary screen, gravure, flexo with the ability to add flash sintering and plasma treaters.

We invite you to visit our stand, where a warm welcome awaits, and where you will find our flagship machine on display!
